

Viron WATERBALANCE

All Pool and Spas require a constant level of sanitiser to purify the water. Whether by salt chlorinator generated chlorine, ozone, or added by hand, the failure of most systems is the inability to add the correct level of sanitiser. In addition, most will change the pH of your water, quickly making the sanitiser itself significantly less effective.

AstralPool's Viron Water Balance overcomes both problems and significantly reduces the level of maintenance required to keep your pool or spa water pure. By constantly measuring and adjusting the sanitiser to suit the conditions of your pool and maintaining the perfect pH for the sanitiser to operate in, manual checking of chlorine and pH levels on a weekly basis is almost eliminated.

Balancing the pH of the water, means a significant reduction in the level of sanitiser required. And whether the water is warm, cold, used a lot or infrequently, the Viron Water Balance automatically adjusts the sanitiser dosing level to match.

Sophisticated electronics using fuzzy logic continually adjust the dosing level to match your pool's particular requirements and changing use throughout the season.

And combined with the Viron CL Cartridge Filter means if your pool becomes too full, you can drain the water directly onto your garden without the need for dilution, making further good use of your precious water.

The Viron Water Balance electronically connects to the Viron Heater and Pump and at the touch of the spa button, automatically adjusts the temperature, flow rate and sanitiser level to Spa Pool settings, creating the perfect warm water environment for a blissful, relaxing and healthy spa.

And Viron is good for the environment too – reducing the level of sanitiser used and significantly lowers the impact of rising salinity that that backwashing sand filters connected to Salt chlorinators can cause.

Viron Water Balance – reduces maintenance and automatically adapts to your pool or spa's chemical requirements.
